

Additional figures

Below are displayed additional figures from the computation portion of the work. Each of them is labelled in the plot area and hence they do not have additional titles. They visualize results for the computation runs that were excluded from the main work for brevity reasons. These results were still commented on in the main work and the attached plots can be referenced to when needed.

The figures already included for parameter sweeps in the main work are duplicated here, to ease cross-referencing different parameter runs.
